

## **MOVEMENT OF ENGINE AND TENDER**

### **I. GENERAL**

The Contractor shall submit with their sealed bid a proposal for moving the two units on to the new track.

### **II. POSSIBLE METHOD OF MOVING THE TWO UNITS**

*Note:* Consider that the engine drivers are frozen and will not roll.

Use grease on the tracks to facilitate the sliding of the units on the rails.

Connect steel cable to front of engine and use equipment to pull the two units along the track. (Possible pieces of equipment could be a large wrecker, trackhoe, dozer, etc.). If necessary, provide secondary equipment to push on the tender as other equipment is pulling on the engine.

### **III. CLEAN UP**

After the two units are in place the Contractor is to clean up any portion of the park damaged by the work.
