

Edison originally made Nickel-Iron (NiFe) storage [rechargeable] batteries. Later (1970?) they made nickel-cadmium (NiCad) storage batteries. The electrolyte in both types is potassium hydroxide.

Right-side battery with orange-pink (maybe originally red) plastic caps has green label:

Edison *Nickel-Cadmium* Storage Battery

Manufactured by McGraw-Edison Company
Edison Battery Division Bloomfield, N.J. 07003

On left battery, does yellow cap indicate Edison Nickel-Iron (NiFe) battery?

Or did Edison use both color caps on Nickel-Cadmium batteries?
